AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1 - 48. (canceled).

49. (new): An apparatus for displaying multimedia data using an element, the apparatus comprising:

a memory under control of a processor, the memory comprising software enabling the apparatus to:

obtain reference information of asset elements from the element;

search the asset elements using the reference information; and

display one or more audio data together with one or more photo data based on time information of the element,

wherein location information of the one or more audio data and one or more photo data is provided from the searched asset elements, and

wherein the reference information refers to an identification information to identify the asset element.

50. (new): The apparatus of claim 49, wherein the software further enables the apparatus to check whether assets for display comprise one or more audio data and one or more photo data.

51. (new): The apparatus of claim 49, wherein the element comprises a sub element comprising an attribute value indicating a duration of displaying the each photo data.

52. (new): The apparatus of claim 49, wherein according to a type of asset one of thumbnail rendition, document icon, an album icon, and a sound icon is obtained and wherein code is generated for the asset type.

53. (new): The apparatus of claim 49, wherein a user defines duration and type of transition between the asset and next asset.

54. (new): The apparatus of claim 49, wherein the element and the asset elements are represented by a markup language.

55. (new): The apparatus of claim 54, wherein the markup language is described according to a MusicPhotoVideo (MPV) format.

56. (new): The apparatus of claim 49, wherein the reference information and the time information are represented by a form of an element defined by a schema.

57. (new): The apparatus of claim 49, wherein a name of the element is AudioWithStill.

58. (new): The apparatus of claim 49, wherein the element further comprises information on an attribute of an asset.

59. (new): An apparatus for displaying multimedia data using an element, the apparatus comprising:

a memory under control of a processor, the memory comprising software enabling the apparatus to:

generate an element comprising reference information for referring to asset elements and time information for displaying assets, wherein the asset elements comprise location information of one or more audio data and one or more photo data; and

display the one or more audio data together with the one or more photo data searched by the location information based on the time information of the element, wherein the reference information refers to an identification information to identify the asset element.

60. (new): The apparatus of claim 59, wherein the element comprises a sub element comprising an attribute value indicating a duration of displaying the each photo data.

61. (new): The apparatus d of claim 59, wherein according to a type of asset one of thumbnail rendition, document icon, an album icon, and a sound icon is obtained and wherein code is generated for the asset type.

62. (new): The apparatus of claim 59, wherein a user defines duration and type of transition between the asset and next asset.

63. (new): The apparatus of claim 59, wherein the element and the asset elements are

represented by a markup language.

64. (new): The apparatus of claim 63, wherein the markup language is described

according to a MusicPhotoVideo (MPV) format.

65. (new): The apparatus of claim 59, wherein the reference information and the time

information are represented by a form of an element defined by a schema.

66. (new): The apparatus of claim 59, wherein a name of the element is AudioWithStill.

67. (new): The apparatus of claim 59, wherein the element further comprises information

on an attribute of an asset.
